

Developer

Sapientia technologies limited is a data-driven technology firm. Leveraging cutting-edge technologies, our scientists, engineers and investment professionals run through terabytes of data every day to continuously deliver investment and trading decisions.

Our partners have worked at the world's topmost quantitative hedge funds and proprietary trading departments of investment banks. They have attained impressive results across major stock, futures, and FX markets. Coming from diversified academic and cultural backgrounds, Sapientia's team share the common quality of being highly motivated, meticulous in details, and well trained in systematic thinking.

We conduct asset management business in both mainland China and Hong Kong, licensed by AMAC and SFC, respectively.

Job Overview

The developer will be an integral part of our trading and research process.

Core Responsibilities

- Develop, test, and maintain live trading systems on top of our in-house DMA system. Emphasis will be on the prompt, robust internal flow from data to execution rather than market access.
- Scrape data from various sources, including the internet, data terminal, etc. Work with DBA to ensure robust delivery of data.

Skills & Requirements

- Development experience in Linux platform.
- Working knowledge of C++, Python, and their interfacing to each other.
- Good communications in team settings.
- (Plus) Development experience in windows is a plus but not necessary.
